JACKPOT FORAGE TURNIP

GRAZING AND COVER CROP TURNIP

- LOWER GROWING BULB
- IDEAL FOR GRAZING AND COVER CROP
- EXCELLENT REGROWTH AFTER GRAZING
- HIGH FORAGE YIELD
- EXCELLENT PALATABILITY

Jackpot forage turnip is a new low-growing variety bred for use in grazing operations and for cover cropping. The **Jackpot** bulb top doesn't protrude from the ground as much as old varieties, allowing it to stay protected from animals as they graze. This allows for better regrowth and higher forage yields. In addition, **Jackpot** has excellent palatability, helping increase weight gains. **Jackpot** is also an ideal choice for cover crop use. Its bulb helps break up soil and protects against wind and rain erosion. Strike it rich with **Jackpot**.
